Ask 3 Questions

Become more involved in decisions about your healthcare. You may be asked to make choices about your treatment. To begin with, try to make sure you get the answers to three key questions:

1. What are my options?
2. What are the positives and negatives of each option for me?
3. How do I get support to help me make a decision that is right for me?

How We Use Your Information

For details on how we collect, use, and store the information we hold about you, please see patient information leaflet, Ref. **Corp 006** How we use your information, this can be found on the Patient Information Leaflets page on the Trust website, see details on the front cover.

This leaflet is also available in audio, large print, braille, and other languages upon request.
For more information please ask in the department/ward.

Leaflet title: Ward 3 Leigh Infirmary Eye Unit-Injection Clinic
Produced: March 2022
Expiry date: March 2024

What are the risks with these injections?

As with any medical procedure, there is a small risk of complications that may occur following an intra-vitreous injection. Most complications that might occur are from the injection itself, rather than the drug.

For most patients, the benefit of the treatment outweighs the small risk of injection injury. This should have been discussed with you when you started your course of treatment.

The following are the main potential risks and side effects of anti-VEGF eye drug injections, but this is not a complete list of all risks. These risks are all rare. Significant loss of vision due to this treatment is very uncommon.

- You might notice some discomfort and redness and your vision may be blurred for the first few days after your treatment and this usually settles between 24 – 48 hours.

- You may notice floaters in your eye which usually disappear after a few days.
- Sometimes the eye may feel gritty and watery. This should settle down after a day.
- It is recommended that you take your normal analgesia after the injection if your eye feels uncomfortable
- Serious eye infection - If your eye becomes progressively red, sensitive to light, swollen with increased pain, or if your vision gets worse after the injection treatment, you must seek medical help and advice from an ophthalmologist.

This might indicate infection and normally occurs within the first few days after the injection. The risk is minimal, but this is the most important complication, and you must contact us immediately if you are concerned about this.

How to contact us

Ward 3 Eye Unit is open 8:30am until 5pm Monday to Friday. During this time, please contact us on the following number if you are concerned:

Ward 3 Eye Unit:

01942 773116 or 01942 822244

Outside of these hours you may attend your local A&E department.

A&E department at RAEI Wigan is open 24 hours a day and is contactable on 01942 822440. They may refer you to a specialist Eye Unit at Manchester or Liverpool. If you wish to contact Manchester or Liverpool Eye Units directly when Ward 3 Eye Unit is closed, they are available on the following numbers:

Manchester Royal Eye Hospital:

0161 2765597

Royal Liverpool Eye Hospital:

0151 706 2000

IMPORTANT - your vision may be at risk if you do not complete this course of treatment. Before you leave the unit, please get your next appointment, and attend as planned.
