

## Why an eye injection may be cancelled on the day

- If you are unwell e.g. urine infection, chest infection, heavy cold, eye infection or are taking antibiotics for any infection
- If you recently had a heart attack/stroke
- Are pregnant or breast feeding
- You must not have any vaccines the week before or after your injection

**Please leave contact lenses out 3 days prior and post injection.**

**If any of the above apply, please contact: 01942 822244 Monday to Friday 08:30am until 5pm.**

### Comments, Compliments or Complaints

The Patient Relations/Patient Advice and Liaison Service (PALS) Department provides confidential on the spot advice, information and support to patients, relatives, friends, and carers.

#### Contact Us

Tel: 01942 822376 (Monday to Friday 9am until 4pm)

The Patient Relations/PALS Manager  
Wrightington, Wigan and Leigh Teaching Hospitals  
NHS Foundation Trust, Royal Albert Edward Infirmary  
Wigan Lane  
Wigan  
WN1 2NN

#### Ask 3 Questions

Become more involved in decisions about your healthcare. You may be asked to make choices about your treatment. To begin with, try to make sure you get the answers to three key questions:

1. What are my options?
2. What are the positives and negatives of each option for me?
3. How do I get support to help me make a decision that is right for me?

#### How We Use Your Information

For details on how we collect, use, and store the information we hold about you, please see patient information leaflet, Ref. **Corp 006** How we use your information, this can be found on the Patient Information Leaflets page on the Trust website, see details on the front cover.

This leaflet is also available in audio, large print, braille, and other languages upon request.  
For more information please ask in the department/ward.

## What are the risks with these injections?

As with any medical procedure, there is a small risk of complications that may occur following an intra-vitreous injection. Most complications that might occur are from the injection itself, rather than the drug.

For most patients, the benefit of the treatment outweighs the small risk of injection injury. This should have been discussed with you when you started your course of treatment.

The following are the main potential risks and side effects of anti-VEGF eye drug injections, but this is not a complete list of all risks. These risks are all rare. Significant loss of vision due to this treatment is very uncommon.

- You might notice some discomfort and redness and your vision may be blurred for the first few days after your treatment and this usually settles between 24 – 48 hours.
- You may notice floaters in your eye which usually disappear after a few days.

- Sometimes the eye may feel gritty and watery. This should settle down after a day.
- It is recommended that you take your normal analgesia after the injection if your eye feels uncomfortable
- Serious eye infection - If your eye becomes progressively red, sensitive to light, swollen with increased pain, or if your vision gets worse after the injection treatment, you must seek medical help and advice from an ophthalmologist.

**This might indicate infection and normally occurs within the first few days after the injection. The risk is minimal, but this is the most important complication, and you must contact us immediately if you are concerned about this.**

### Important information

Your vision may be at risk if you do not complete this course of treatment. Before you leave the unit, please get your next appointment, and attend as planned.

## How to contact us

### **Boston House Eye Unit**

is open 8:30am until 5pm Monday to Friday. During this time, please contact us on the following number if you are concerned:

### **Boston House Eye Unit:**
